

The Views in OTR

Much like any every other DAW, OTR has three separate views to work within. The first is the main view (sometimes referred to as the Tracking View) that you see when a project is loaded. The second is the mixing view. It is essentially an overlay of a set of vertical faders across the screen. The third is the midi view. The midi view is accessible by double clicking on any recorded midi items in the main tracking view. Let's take a look at them....

Track View

This view is accessed by pressing Command+- on the keyboard.

Mixer View

This view is accessed by pressing Command+= on the keyboard.

Now on to the midi view!
